I'm not sure if I'm allowed to share test results without consent from the companies, or an approved FOIA request. I'd suggest that you ask Solar about it.

Can you share the 91-99 ppb data? I haven't seen anything anywhere near that high.

Thank you!

Hi Lillian,

I apologize if I misspoke, but I don't recall saying that. I've seen some test results around 91-99 ppb. If there have been test results in the triple digits, I would think companies would try to avoid sharing that with us unless they have to.

Thanks,

Hi,
I don't know if you remember that we spoke last week – but during our call, you mentioned having seen some SOLAR data on the dry low NOx combustion systems that did not meet the formaldehyde emission limits – I think you said it was around 140 ppb. I have looked around and found additional data, but none anywhere near that high. Could you send me a copy of the data? I am puzzled. Thank you.

Great, I just need to clarify which company or organization who filed a petition are you working on behalf of here?

Yes – this is it. I was looking for it and could not find it.

I (obviously) had the 2001 memo. Thanks!

Hi Lillian,

Which petitioner are you asking on behalf of?

I believe this is the memo you're asking about:
<https://www.regulations.gov/document/EPA-HQ-OAR-2002-0060-0041>

Thanks,

Jacob Herbers (he/him)

Hi,

I am assisting with a YYYY petition response and I cannot seem to find the 4/3/2002 memo that supercedes the attached memo. Would you be able to send a copy? I cannot find it in the docket. Thanks.
